Description	
In a project I have enums in the file 'ext_tables.sql'. With #82795 a new behaviour was introduced to my local environment (Windows, Apache + Php 7.1). When using the database analyzer I get the following error:	
<pre>Uncaught TYPO3 Exception Unknown database type enum requested, Doctrine\DBAL\Platforms\MySQL57Platform may not support it. Doctrine\DBAL\DBALException thrown in file ###\typo3_src_87\vendor\doctrine\dbal\lib\Doctrine\DBAL\Platforms\AbstractPlatform.php in line 423 . 22 Doctrine\DBAL\Platforms\AbstractPlatform::getDoctrineTypeMapping("enum")</pre>

Revision ba5b5242 - 2018-03-18 13:27 - Alexander Stehlik

[BUGFIX] Move Doctrine custom type init back to ConnectionPool

To prevent race conditions etc. the custom type init which was moved in patch <https://review.typo3.org/#/c/54512/> gets reverted.

To fix the issue with the pageUnavailable_handling the method TyposriptFrontendController::connectToDB handles the error correctly via try catch block.
