Localized records with child records are not editable for Users limited to language

This Bug is easy reproducible with the news-Extension.

1. Create a News record and add a related Link in Relations Tab with admin-User.
2. Translate the News record to second language (in my case german) with admin-User.
3. Delete the related Link in the localized News record with admin-User.
4. BE-User limited to language german can’t edit the translated News record.

Following Message appears:

Sorry, you didn't have proper permissions to perform this change.
ERROR: Language was not allowed.

I think it is not possible to show the related Link of the default language.

This Bug applies to all my Extension with IRRE Elements.
