#### Description

Some time ago, at a T3AMD in Munich, we discussed the UX of the TYPO3 backend and the fact, that lots of integrators still give clients backend logins with all available access rights.

I proposed to adapt the awesome strategy of the ckeditor (<https://typo3worx.eu/2017/02/configure-ckeditor-in-typo3/>) to provide distinct default configurations. If a backend user is created and it's no Admin or "System Maintainer", then a T3config preset could be associated with the account. This preset could be of type "minimal" and then show the page-, list- and filemodule only, and only headline and bodytext in tt\_content table.

It's a long stretch (requires [#80212](#)), but maybe a useful idea to enhance the default UX of TYPO3 for editors.
