

## TYPO3 Core - Bug #84119

Epic # 90674 (In Progress): Backend UI not reflecting permissions

### Limiting a BE-User to default language results in inconsistent saves.

<b>Description</b> <b>scenario</b> <p>I have a backend user who is only allowed to edit the default language. This user now tries to edit a text media content element.</p> <b>expected behavior</b> <p>The user is able to save the content element.</p> <b>What actually happens</b> <p>The user gets this error: recordEditAccessInternals() check failed. [ERROR: Language was not allowed.]</p> <p>I assume this is because of the new copying behaviors. If I check the \TYPO3\CMS\Core\Authentication\BackendUserAuthentication::recordEditAccessInternals method, I see that all languages are checked for which a translation of the content element exists.</p> <b>Workaround</b> <p>I extended the BackendUserAuthentication class and removed that specific call to checkLanguageAccess. The other languages are still not visible but they could be edited now.</p>

## History

### #1 - 2018-03-12 22:01 - Wolfgang Klinger

I can confirm that (TYPO3 8.7.10).

### #2 - 2018-06-21 14:22 - Gerrit Code Review

- Status changed from New to Under Review

Patch set 1 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server. It is available at <https://review.typo3.org/57287>

### #3 - 2018-06-21 15:33 - Tymoteusz Motylewski

Does the element you try to edit and save need to be translated?

### #4 - 2018-06-21 15:39 - Marco Pfeiffer

Yes, you'll need a content element that is translated to another language.

If a user now tries to edit the default version without having access to the translated version, then you'll get that error.

**#9 - 2019-12-20 09:47 - Christian EBI**

I can reproduce this problem in TYPO3 9.5.13.

The following scenario:

- Editor with language restrictions, for instance: languages "default" and "german"
- Editor tries to edit a tt\_content element in "default" language.
- The content element can be translated to other languages the editor has no access permissions for.

The problem does not occur when editing localized records, only the default language is affected.

The process\_datamap() function in DataHandler should probably not call "\$this->BE\_USER->recordEditAccessInternals(\$table, \$id);" in this case.

I'm impressed that not more people had this problem over the course of 2 years. Am I missing something here?
