Description I have a project where content can be edited via a RTE in the backend and displayed via pt_list in the frontend but pt_list does not yet have the ability to add the missing p-tags since they are not stored in the db. to make this work, i need to set plugin.tx_ptlist.view.filterHtml = 0 but that alone does not fix the problem. Please add the feature to render RTE fields with p-tags. Here I found some information about that: http://www.pi-phi.de/rendering.html
