Description			
<p>If using content menu in page tree to access: page editing, history/undo, access, export, import active page in page tree won't be changed correctly while taking actions with a page.</p> <p>Reproduce: select "Root page", open editing for another page using page tree menu from page icon. In page tree "Root page" is highlighted but it's not the page being actually edited.</p> <p>Leads to user confusion. Active page in page tree should be switched while actions been taken with the page. Especially confusing while using "History/undo".</p>
