

TYPO3 Core - Story #84508

Epic # 84101 (Closed): The core must provide configurable structures for both pages and elements out of the box

as an editor, I want to compose my page contents structure before editing the contents, in order to focus on the zoning when I am editing a new page

Description			
The editors problem today is that they have only one way to compose their pages, and it's interruptive and quite long : Click on the position, choose the content type tab, choose the content, fill the content (that is really interruptive), save and close the content, and now I see again my page composition.			
The need is to first compose the page (contents, positions, columns, etc.) and after edit the texts and illustrations.
