Description

By setting up a storage and a brandnew user and removing the group the permission to just READ files and NOT to delete those the user can delete files or folders anyway. That shouldn't be!

I tried it to set it in the BE user group

Backend-Benutzergruppe "Publisher" auf Wurzelebene bearbeiten

and by deny him the permissions in the files and folder permissions by disable this on

Rechte für Dateioperationen:

Verzeichnis:

Dateien:

- Alle umschalten
- Dateien: Lesen
- Dateien: Schreiben
- Dateien: Hinzufügen
- Dateien: Umbenennen
- Dateien: Ersetzen
- Dateien: Verschieben
- Dateien: Kopieren
- Dateien: Löschen

plus adding the PageTS Script to disallow him to deny the user on the shared storage (i.e. the storage 1)

```
permissions.file.storage.1 {
    addFile      = 1
    readFile     = 1
}
```

```

writeFile      = 0
copyFile      = 0
moveFile      = 0
renameFile    = 0
unzipFile     = 0
deleteFile    = 0
addFolder     = 0
readFolder    = 0
writeFolder   = 0
copyFolder    = 0
moveFolder    = 0
renameFolder  = 0
deleteFolder  = 1
recursivedeleteFolder = 0
}

```

But after that the user is still able to DELETE files and folders everywhere!

The set upped permission seems not to work at all! No matter what you set as permissions - nothing works!

Are there any news concerning this issue? It would be great if anyone could answer me just to know what priority this bug has.

Thanks.

#3 - 2018-05-08 15:28 - Guido Schmechel

Hi Angelo, I could not reproduce this in the current master (9.3-dev). Are you sure you have set the user permissions? These are almost all unlocked by default. This will overwrite the group settings.

#4 - 2018-05-15 15:43 - Angelo Previtali

Hello Guido
currently I need it on a 8.7.13. Can you retry it on a 8.7.13 (or a 8.7-branch?). If on the editor group I lock every thing for deleting it the editor STILL has all the rights to delete files.
Thanks for helping me out of this (or better) fixing it.
Regards,
Angelo

#5 - 2018-05-15 15:51 - Angelo Previtali

Tried on a 9.2.0 - same results. Even if an editor has NO RIGHTS to delete files HE CAN. Same as on a 8.7.

#6 - 2018-05-15 22:58 - Riccardo De Contardi

Did you use *usergroup* permissions or *user* permissions?

How are the *user* permissions set?

I think that the problem here is: how should we interpret the *user* permissions against the *usergroup* permissions? Is it a **sum** or a **replacement**? I hope I've made myself clear

#7 - 2018-05-16 07:28 - Angelo Previtali

I used USERGROUP permissions to set up the file permissions, right. This isn't working. Why? It should, right? Any hint?
Even if a set permissions on a USER the permissions for the files aren't working.

My case is: The USER (in the usergroup) has NO access to delete, modify, etc.) any files or folders. The USERGROUP has ALSO NO access to do the same thing. So this must be a bug.

Ok. I tested something and now it seems that all the icons to delete, replace, modify, etc. are away (THX to Riccardo De Contardi for the hint!).

BUT now HOW can the properties on the singles files/folders be adapted? See printscreen below.

Even if the USER and the USERGROUP has NO access to do anything then READ files the properties on a file/folder are still here. He still can delete, rename, copy, etc. those files.
Still a bug :)

ok so there is a problem with the context menu; I don't currently remember if there is already an open issue.

About my previous note about the consistency of user/usergroup permissions I have already put a comment here to explain my point of view [#76273](#)

#11 - 2018-06-26 07:28 - Angelo Previtali

Are there some news concerning this issue? Will this be fixed somehow and somewhere?

I cannot reproduce this on v9/master. My setup:

- Usergroup with Files "Read" and Directory "Read" permissions
- User with that UserGroup and explicit set Files "Read" and Directory "Read" permissions

Result:
- User can see folders and files in storages but context menu and extended view only contain "Info" and "Copy" - no delete or rename stuff - see screenshot (note the lock on the folders, too).

Checked in 8.7.24 and 9.5.5 > works. Thx

You can close this ticket.
