

TYPO3.Flow - Feature #8462

Check subobjects in query rewriting

2010-06-23 14:49 - Andreas Förthner

Status:	New	Start date:	2010-06-23
Priority:	Should have	Due date:	
Assignee:		% Done:	0%
Category:	Security	Estimated time:	0.00 hour
Target version:		Complexity:	
PHP Version:			
Has patch:			
Description			
For usual queries this could be done by adding join conditions. For an object retrieved by UUID this has to be discussed.			

History

#1 - 2010-06-24 13:08 - Karsten Dambekalns

When we introduce this we need to make sure we do not delete stuff that was kept from being visible. Currently the danger is in the use of `removeProperties()` within `setProperties()`...

#2 - 2010-07-05 16:22 - Andreas Förthner

With the current persistence backend implementation this is not needed. But as soon as the backend optimizes queries to fetch more than one object at a time, we will have to intercept the query optimization and add the needed constraints for all fetched subobjects.
