Description			
If there is any error in an ext_tables.sql the database analyzer does not show any changes that should get applied and not error message. It simply shows nothing.			
Because of this, if there are any ext_tables.sql with invalid SQL, none of the changes in the database schema will get applied.			
(Configuration preset: debug is selected)

this has been resolved in the meantime,

having e.g. following

```
CREATE TABLE fe_users (
    felogin_redirectPid tinytext
    felogin_forgotHash varchar(80) default ''
);
```

mind the missing , between the 2 cols, I get the following:

```
[SQL Error] line 0, col 54: Error: Expected NOT, NULL, DEFAULT, AUTO_INCREMENT, UNIQUE, PRIMARY, COMMENT, COLUMN_FORMAT, STORAGE or REFERENCES, got 'felogin_forgotHash' in statement: CREATE TABLE fe_users ( felogin_redirectPid tinytext felogin_forgotHash varchar(80) default '' );
```
