**Description**

TYPO3\CMS\Rte\CKEditor\Controller\BrowseLinkController uses ['richtext' => true] as it's entire tca field config. With this field config the default RTE config is always been loaded. Custom configuration, like defalt CSS classes, can only be achieved by overriding $GLOBALS['TYPO3_CONF_VARS']['RTE']['Presets']['default'].

For testing purposes I just build a small extension, which will override the richtext configuration via 'columnsOverrides' for the CType 'text'. Notice that this will have no effect if you have a PageTS config which sets RTE.default.preset (just like EXT:bootstrap_package does).

Here is the link: [https://github.com/KamiYang/foobaa](https://github.com/KamiYang/foobaa)

Revision d18e495b - 2018-06-01 11:23 - Tymoteusz Motylewski

[BUGFIX] Correctly resolve RTE preset configuration for link browser

Replaces hardcoded RTE configuration in BrowseLinksController with one resolved by Formengine when rendering a field.

This takes into account e.g. column overrides.

The RTE configuration preset name is now kept by Formengine in
['processedTca']['columns'][$fieldName]['config']['richtextConfigurationName']

Then it's being passed as parameter P[richtextConfigurationName] from RTE field to the BrowseinksController

Resolves: #84943

Releases: master, 8.7

Notes on testing:
- with test extension installed and patch applied
- open TEXT content element
- go to the RTE bodytext field
- select some text
- click chain icon, to open link browser
- in the link browser you should see a "class" select box with one option.

#9 - 2018-06-01 11:25 - Gerrit Code Review
Patch set 1 for branch TYPO3_8-7 of project Packages/TYPO3.CMS has been pushed to the review server. It is available at https://review.typo3.org/57109
