Target version:		Complexity:	
PHP Version:		Sprint Focus:	
Tags:			
Description			
In the core there should be a proper API to register, validate the definition and retrieve the parsed YAML configuration.			
Things that should be covered:			
- register YAML configuration files at one central place			
- define a definition for YAML files to validate that the configuration provided is correct			
- proper override / combining / extending of a YAML configuration by registering another file (useful if an extension extends some yaml configuration)
