Description

Under some circumstances an `TYPO3\CMS\Extbase>Error>Error` is rendered instead of an `TYPO3\CMS\Extbase\Validation>Error`, which is extending the `Error>Error`.

This is not supported. There are checks for `Validation>Error` to retrieve the code.

These circumstances are for example:

Non complete file uploads, e.g. to server settings and file size.

Non allowed mime type.

Associated revisions

Revision 8c4abd65 - 2018-07-31 13:19 - Daniel Siepmann

[BUGFIX] Allow `Error>Error` to be translated in form extension

Some errors added while processing forms are of Type `TYPO3\CMS\Extbase>Error>Error` instead of `TYPO3\CMS\Extbase\Validation>Error` as they occur in different places. E.g. the mime type check is handled inside the `TypeConverter` and file uploads can be canceled due to file size.

These errors should not lead to errors when rendered in Fluid.

Resolves: #85586

Releases: master, 8.7
