Epic # 84726 (Closed): Initiative: URL Routing Integration / Site Handling

Epic # 84728 (Closed): Introduce speaking URLs for pages

Epic # 84729 (Closed): Implement "slug" handling for pages and other records

Generate default slug for entities not being submitted via FormEngine

Description			
Entities that are not created using the FormEngine don't have "slug" fields as user submitted content and thus only will be filled with the default value (which is an empty string in this case). However, the slug should be generated based on the given input parameters (e.g. title field or position in rootline). This occurs e.g. for the following actions:			
<ul style="list-style-type: none">• drag'n'drop creation of new pages in page tree• move page in page tree into new/different boundary of a site• copy page in general (handling of duplicate slug names)• create multiple pages via context menu (aka function wizards)			
Fixing all these places might be one possibility, however it seems to be much better to introduce a specific handling in DataHandler (maybe similar to DataMapProcessor for l10n_state)

Revision 06c67dc4 - 2018-09-03 20:28 - Oliver Hader

[BUGFIX] Ensure that slugs are always calculated in DataHandler

When NOT using FormEngine to create a new page (e.g. in the pagetree or via the "Create multiple pages" wizard), so just using DataHandler magic is uttermost critical that a slug is always created, to ensure the "uniqueInSite" functionality, and to access a page, even though the page was created after the upgrade wizard has run.
