Description

Hello Core-Team,

I have just checked out current master at cf7917d03bf81b9dbb71f475daee2b483c9feef7

Right-click at a page and choose activate. You will see some refreshments, but page is still disabled visually. Press page-tree update button and page will be displayed correctly.

Right-click at a page and choose activate. You will see some refreshments, but page is still disabled visually. Right-click at another page and activate it, will do some refreshments and my previous activated page will be shown as activated. But current page is still displayed as inactive.

Nice greetings

Stefan

I failed to reproduce the issue. Which browser do you use here?

#2 - 2018-09-03 08:44 - Stefan Froemken

Google Chrome 68.0.3440.106

It seems to be timing problem. Sometimes it works, but most time not.
I only have three pages assigned. No site configuration.

Same problem in Safari. I have 4 pages in parallel. Try to (un-)hide all pages just one after the other.

@Stefan Froemken thank you for your reply; do you mind if I close your issue in favor of the older one?

Thanks
