Target version:		Spent time:	0.00 hour
Description			
TYPO3 4.3.3 icebox 0.8.0			
When I create a new ICE-Element or open an existing ICE-Element I get this PHP-Warning:			
<pre>PHP Warning: substr() expects parameter 2 to be long, string given in /var/www/spielwiese4.3/online/webroot/typo3conf/ext/icecore/inc/class.tx_icecore_additionalFunctions.php line 7</pre>			
When the ICE-Element is in an ICE-Box I get this warning, too. It also appears when you select an "ICE Element Type".
