#### Description

If 9.4 is set up with composer and the recordlist is not part of the installation which can be faked by removing recordlist from PackageStates.php breaks at least the about module.

With first uncached hit there is an exception

```
#1351584844 TYPO3Fluid\Fluid\Core\Exception  
Either "key" or "id" must be provided for f:translate
```

with 2nd hit, the list module is still displayed in the about module but broken icon and no title.

short analyse shows this

```
[1] => Array  
(  
    [name] => ViewpageView  
    [icon] =>  
    [iconIdentifier] => module-web_ViewpageView  
    [label] => LLL:EXT:viewpage/Resources/Private/Language/locallang_mod.xlf:mlang_tabs_ta  
b  
    [shortDescription] => LLL:EXT:viewpage/Resources/Private/Language/locallang_mod.xlf:ml  
ang_labels_tablabel  
    [longDescription] => LLL:EXT:viewpage/Resources/Private/Language/locallang_mod.xlf:mla  
ng_labels_tabdescr  
)
```

```
[2] => Array  
(  
    [name] => list  
    [icon] =>  
    [iconIdentifier] =>  
    [label] =>  
    [shortDescription] =>  
    [longDescription] =>  
)
```

see that list is still part of the submodules but of course everything empty - which explains exception and broken icon.

#### History

##### #1 - 2018-09-24 07:40 - Josef Glatz

When using typo3/minimal recordlist package is required.

When does such scenario happen? I thought editing PackageStates.php by hand is scorned?
