[TASK] Mitigate argon2i hash issues

- Let the "stored hash uses not supported mechanism" bubble up. Instead of just a "login failed", an error is raised hinting that something is broken.
- Improve exception message #1533818591: If an upgrade or new installation has been performed on a system that does support argon2i, users are upgraded to this mechanism. If the instance is later deployed to a server that does not support argon2i, the hash comparison will fail.
- Improve exception message #1533822084: This one is usually only raised if a core upgrade from v8 to v9 has just been performed on an instance that does not support argon2i, and a backend login is executed before the install tool silent configuration upgrader configured the system properly.
