- Target version changed from 9 LTS to Candidate for Major Version

For now (9LTS) you can use the env() feature to get environment specific variants in all values. For 10 we might implement this feature (which will mean a rework of the GUI as we have a nesting level more).

In v9.5.5 it's doable by adding a baseVariant into the yaml, but no GUI for it. Could be added in a future major version into the Site module. If you feel like tackling the task, would be really cool!

#9 - 2020-08-26 12:55 - Marc Hirdes

Would be great to have a way to prevent costum values in the language settings like the base variants from override by the GUI.
