Description	
TYPO3 9.5 Fresh new installation.	
When you create a new page through the "List" module ("+" icon being used on the right frame, not the drag-and-drop feature in the pagetree) and you select, for example, "Create a new page > Page (inside)", then the properties don't show the "doktype" field.	
After saving and re-opening the page properties again, the "doktype" field is shown, but it shows "INVALID VALUE [0]".	
This only affects pages created inside of the root page (pid=0).

Revision 4e2f110d - 2018-10-05 16:33 - Andreas Fernandez

[BUGFIX] Omit `overrideVals` in NewRecordController

In the old times of pages_language_overlay, the "New Record" wizard automatically re-used the doktype of the parent table which was `pages`. Since pages_language_overlay vanished, the `overrideVals` in the links in the wizard use the `pages` table.

This results in invalid value for `doktype` if a page in pid=0 is created, as pid=0 has no doktype.

For this reason, the `overrideVals` parameter is removed.
