Revision 639c7e0f - 2019-12-11 13:51 - Richard Haeser

[FEATURE] Add PSR-14 event to control hreflang tags to be rendered

A PSR-14 event is introduced to make it possible to control the hreflang tags that will be rendered.

Additionally the class HrefLangGenerator is migrated to be a listener to the new event.

Resolves: #86614

Releases: master

I have a use case. A customer has a multidomain setup with different page trees and language domains. Some of the pages in different trees should be connected via hreflang. This is a case where the connections only can be set manually. Therefore we need a way to modify or prevent the current hreflang generation. "additionalHeaderData" is a place where we can't modify the data.
