

## Static Info Tables - Feature #86983

### Found a solution to setup all static\_info\_tables extension via an automatic deployment

<b>Description</b> Our automatic deployment use typo3_console. We execute the task <a href="#">extension:setupactive</a> to be sure, all extensions are correctly setup.  Problem is that the extension static_info_tables_de has a non full working file ext_tables_static+adt.sql. This breaks our deployment. Because after import data from static_info_tables the fields for the extension static_info_tables_de are missing. The extension static_info_tables_de is only an example for this problem.  Our current deployment steps: <ul style="list-style-type: none"><li>• Setup all extensions</li><li>• Execute ext_update scripts for extensions</li></ul> The simplest solution is to move data away from ext_tables_static+adt.sql. Data can be update via ext_update script at extension manager or cli

Please close issue.

I found the problem. All data was successfully create by \SJB\StaticInfoTables\Slot\Extensionmanager\AfterExtensionInstall.  
The error was produced by one of our database configuration.

Sorry for that.
