

TYPO3 Core - Bug #87118

Cannot copy content element, if multi-selection mode is selected in clipboard

2018-12-10 14:46 - Philipp Seiler

Status:	New	Start date:	2018-12-10

Description			
<ul style="list-style-type: none">• Create a new content element, e.g. a textmedia element.• Go to the list module of the page, on which the content element was just created.• Select multi-selection mode for clipboard (if it has not already been selected).• Go back to the page module.• Copy the content element by clicking its top-left icon and selecting "Copy" from the context menu.• Insert the copied element below/above the original element with the now visible "Paste after this record"-Buttons.			
Site will reload, no error, but no copy has been created!			
Also no record has been added to the tt_content table.			
The array <code>\$this->clipData['tab_1']['el']</code> in the <code>\TYPO3\CMS\Backend\Clipboard\Clipboard</code> class is simply empty. When switching to single-mode, <code>\$this->clipData['normal']['el']</code> will hold the correct tt_content reference.

The issue is still present on 10.4.0-dev, but it seems like an incorrect usage of the clipboard itself:

Correct me if I am wrong but the multi-selection clipboard requires to explicit select and add the records using the icons as on the following attached image

I think that one way to resolve this issue is that when you switch back to Page view, you switch back to the **Normal (single record mode)** (i.e. this one should be the only mode available on Page module). Are there unwanted side effects?

#4 - 2020-07-07 18:07 - Paul Hansen

I trip over this bug frequently, because I generally edit in Page but also switch to List for batch work. It would be a sensible solution, as Riccard suggests, to switch back to the Normal clipboard when in Page module.

#5 - 2020-12-29 13:14 - Richard Haeser

I can confirm. This is also still the case in current master (v11.1.0-dev)
