#### Revision 0c531014 - 2019-07-13 14:20 - Benni Mack

[!!!][TASK] Remove cHash calculation in indexed search

cHash is now added automatically when a URL is generated.  
The relevant query parameters when indexing are stored in "static\_page\_arguments", which allows to remove the database field "cHashParams".

Therefore it is not necessary anymore to configure if cHash should be taken into account when creating a configuration for indexed search.

Instead, when linking to a page on a search result, the page arguments are added. In addition, when pages are indexed, only the static page arguments are evaluated.

Debug Information when indexing is also adding data more sensibly via json\_encode/decode.

Effectively, this means that specific handling for cHash resolving is fully removed from EXT:indexed\_search.
