Description

Hello TYPO3 Team,

I have a TYPO3 9.5.4 with installed maps2 4.2.6. tt_address is currently NOT installed/active
In ext_tables.sql we have added following lines:

```
#  
# Table structure for table 'tt_address'  
#  
CREATE TABLE tt_address (  
    tx_maps2_uid int(11) unsigned DEFAULT '0' NOT NULL  
);
```

Database looks OK and has table tt_address with ONE column called tx_maps2_uid.

COMPOSER: Install tt_address, deactivate it in ExtensionManager, remove all columns tt_address columns from DB by hand or Database Analyzer.

Now activate tt_address again.

NON-COMPOSER: Install or activate tt_address

You will get the Error:

```
There is no column with name 't3ver_oid' on table 'tt_address'.
```

Stefan

History

In DefaultTcaSchema.php there is a \$tables variable which contains all columns to create. But there are two entries for tt_address in there at array key position 50 and 69 (in my case). In entry 50 I have a Table object with the ONE column of my maps2 extension and at position 69 there is a table object with all columns of tt_address.

It seems that you try to add an index for column t3ver_oid while processing entry 50 although t3ver_oid is defined in entry 69 first.

#2 - 2019-01-24 12:10 - Stefan Froemken

Oh dear. Found it. I have added these lines to ext_emconf.php of maps2:

```
'suggests' => [  
    'tt_address' => '3.0.0-4.99.99',  
],
```
