Description Currently an exception is thrown if a YAML file is not found. In some cases it may be that a YAML file is not available, or only available if a extension installed. As example if the new Site configuration with the routeEnhancers. An extension could have its own default route configuration. but if the extension is not installed and the site configuration has a import for this extension, the exception broke the entire TYPO3 installation. My suggestion would be to optionally make imports optional, like: <pre>imports: - resource: "EXT:my_ext/Configuration/Routes/Default.yaml" optional: 1</pre>

History

#1 - 2019-09-21 11:12 - Riccardo De Contardi

- Category set to System/Bootstrap/Configuration

#2 - 2019-09-21 11:32 - Riccardo De Contardi

- Related to Bug #88993: Siteconfig import or symlink breaks TYPO3 if the sourcepath is an deactivated extension added

#3 - 2019-12-13 12:13 - Gerrit Code Review

- Status changed from New to Under Review

Patch set 1 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.

It is available at <https://review.typo3.org/c/Packages/TYPO3.CMS/+62617>

#4 - 2019-12-13 12:14 - Kevin Ditscheid

- Priority changed from Should have to Must have

I added an option to ignore errors in the YAML import, see the applied patch

#5 - 2020-02-29 21:48 - Daniel Goerz

- Status changed from Under Review to Closed

Will be solved with [#88993](#), please continue over there.
