[!!!][TASK] Remove TCEMAIN.previewDomain

The functionality to set a custom TCEMAIN.previewDomain via PageTS is not in use anymore as SiteHandling is using the proper domain anyway already.

Conceptually this does not work anymore, as the base (domain + path prefix) determines Language + Site / PageTree entry point. Setting this to something else via TCEMAIN.previewDomain would not work anyways, so this hack is removed, as we now can safely determine the full (speaking) URL with Site Handling.

In addition, the method BackendUtility::getViewDomain() is now deprecated.

Revision ec55210b - 2020-03-04 18:31 - Christian EBI

[BUGFIX] Remove view button for indefinite source hosts in redirects module

The changes made in #88499 removed the support for "default urls". This left broken view buttons in the redirects module for redirects with "*" set as source host, where no domain could be determined.
