#### Description

A file uploaded through the TYPO3 backend has wrong image dimensions stored in the meta data.

The original file was a TIFF file with size 6000x4000. It has been downsized by Photoshop and exported as JPEG.

Inside the File List the original dimensions (6000x4000) are shown (see "File List screenshot").

#### Impact

Image Crop does not work correctly and produces misplaced images

#### `file` command

```
file ../test-image.jpg
../test-image.jpg: JPEG image data, Exif standard: [TIFF image data, little-endian, direntries=17, height=4000, bps=218, PhotometricIntepretation=RGB, description=, manufacturer=SONY, model=ILCE-6400, orientation=upper-left, width=6000], baseline, precision 8, 1700x1133, frames 3
```

#### GraphicsMagick

```
gm identify -debug events ../test-image.jpg
../test-image.jpg JPEG 1700x1133+0+0 DirectClass 8-bit 165.7Ki 0.000u 0m:0.000003s
```

#### History

- Status changed from New to Needs Feedback

I tested that on current 10.4 master and latest 9.5.14 and it works fine on both. can you pls recheck on a clean installation?

##### #2 - 2020-03-12 12:48 - Daniel Corn

Thank you for looking into it.

I couldn't reproduce it in another installation too.

Can be closed. Sorry for bothering.
