Description			
In the current TYPO3-Master 10.0.0-dev it is not possible to use the value for reply-to from the form input in a form.			
Due to the increasingly stringent spam checks by e-mail providers, it should be possible to read the value for reply-to from the form. It should therefore be possible to use the e-mail address that a user enters in the frontend.			
At the moment this does not seem to work, when sending the form an error message appears:			
<pre>Swift_RfcComplianceException Address in mailbox given [{email-1}] does not comply with RFC 2822, 3.6.2.</pre>			
Attached you find a screenshot of my form configuration.

[BUGFIX] Substitute form references for array keys as well in ext:form

In ext:form, string placeholders, like "{text-1}", can be used inside the finisher to place form inputs, made by the user, inside fields like the email subject, reply to email and name, etc. These string substitutions however were not done for array keys (only array values).

Resolves: #88550
Releases: master

History

#1 - 2019-07-08 16:31 - Susanne Moog

- Status changed from New to Accepted

Research:

\TYPO3\CMS\Form\Domain\Finishers\AbstractFinisher::parseOption uses \$this->substituteRuntimeReferences(\$optionValue, \$formRuntime); -> that only substitutes array values, not keys. The email addresses are an associative array where both keys and values might use placeholders.

#2 - 2019-10-05 10:43 - Gerrit Code Review

- Status changed from Accepted to Under Review

Patch set 1 for branch **master** of project **Packages/TYPO3.CMS** has been pushed to the review server.
