Description	
The current ImportExportController is a big god class concerning multiple things at once. In order to streamline the code better, the controller is split into two controllers.

[TASK] Split ImportExportController

The ImportExportController is responsible for exporting and importing data, which is a bit too much.

In order to streamline the import/export functionality, the controller has been split into two controllers. Due to this, the route to the ImportExportController has no effect anymore, but is kept for bc reasons.

Resolves: #88662

Releases: master
