

TYPO3 Core - Bug #88720

Adding pid option to resolve function of PersistedAliasMapper (Multi-site handling and Extbase enhancer slugs)

2019-07-11 10:39 - Stephan Auer

| Description | | | |
| Hi | | | |
| Basic problem is described here (in case of news): https://stackoverflow.com/questions/55948340/typo3-how-can-i-use-the-same-slug-for-news-on-a-multidomain-setup | | | |
| We are facing the problem with our own Extbase extension. There are two sites in one TYPO3 instance. The extension is managing "shop-infos". In both sites there is a shop called "Billa". | | | |
| So this would be the expected result in list-view for each site: | | | |
| https://www.site.one/shops/billa https://www.site.two/shops/billa | | | |
| For each site there is a folder defined which is storing the "Shop" entries. In list mode everything is working fine. | | | |
| But detail view is not correct. Both links are resolved to https://www.site.one/shops/billa (because uid of first "Billa" is lower than of second). | | | |
| My opinion: | | | |
| - PersistedAliasMapper is using given field to generate the slug (make uid 1 to "billa"; make uid 2 also to slug "billa"). This is happening correctly in function "generate" | | | |
| - But the other direction does not respect the root site / storage folder. So my suggestion would be to add a "pid" param to the PersistedAliasMapper settings, or optional to the "resolve" function there. Because in the "resolve" function just the slug ist taken (and translated) and thrown to the database - searching for an uid. But in our setting, more (in fact two) uids are returned. So the lower one is given for the detail page -> wrong site. | | | |
| If somebody of the core-team feels OK with my suggestion, I can also contribute it. | | | |
| All the best from Vienna Stephan | | | |

[BUGFIX] Declare method of AspectFactory in matcher

The patch for #88720 added a new entry in MethodArgumentRequiredMatcher to cover changes in the class AspectFactory. The entry misses the affected method name which broke the extension scanner.

This patch declares the missing affected method.

It works!

Please release it.

We have about 70 sites in the system, which have the same news title (news-Extension).

Thank you all and keep up the good work!

This patch caused a different problem with the update to 9.5.16. It is now no longer possible to have a global news folder.
root

- domain1
- news
- detail
- ...
- domain3
- global news folder

all links are created correctly, but the detail view goes more, here it comes to a 404.
are there maybe new options to influence the behaviour?
