Description

Using **Test Mail Setup** in the **Environment** module currently fails with an error which can be found in the TYPO3 logfile:

```
Fri, 19 Jul 2019 16:25:30 +0200 [CRITICAL] request="262570147be62"
component="TYPO3\CMS\Core>Error.DebugExceptionHandler": Core: Exception handler (WEB): Uncaught TYPO3 Exception: Too
few arguments to function TYPO3\CMS\Core\EventDispatcher\EventDispatcher::__construct(), 0 passed in
/.../typo3/sysex/core/Classes/Utility/GeneralUtility.php on line 3450 and exactly 1 expected | ArgumentCountError thrown in file
/.../typo3/sysex/core/Classes/EventDispatcher/EventDispatcher.php in line 35. Requested URL:
http://.../typo3/install.php?install[controller]=environment&install[context]=backend - {"TYPO3_MODE":"BE","exception":{}}
```

For some reason dependency injection does not seem to be working properly here.

[BUGFIX] Ensure EventDispatcher is available in installtool container

The Mailer class used by EnvironmentController::mailTestAction() requires the EventDispatcher to be available. Provide it by configuring EventDispatcher and ListenerProvider in a ServiceProvider, which enables usage from the failsafe install-tool container.

Note: Event listeners that are registered using symfony tags will still be added to the ServiceProvider instantiated ListenerProvider in non-failsafe mode. The symfony generated factory will look like:

```
$this->services['TYPO3\CMS\Core\EventDispatcher\ListenerProvider'] =
    $instance =
        \TYPO3\CMS\Core\ServiceProvider::getListenerProvider($this);
    $instance
        ->addListener(
            'TYPO3\CMS\Core\Mail\Event\AfterMailerInitializationEvent',
            'TYPO3\CMS\Core\Compatibility\Slot\PostInitializeMailer',
            NULL
        );
```

Resolves: #88806
