Description

If one uses the context api extensive and has to write the same strings again and again this is really sensitive to errors (typos). Furthermore there is no IDE support like autocompletion or search for occurrences.

Thats why there should be constants for the aspect names in place.

As the patch has been abandoned I'm closing this issue for now (as code cleanup issues tend to go stale). If you want to continue on this topic, please first discuss implementation on decisions.typo3.org and open a new issue.
