Description	
Same as Bug #62273 :	
<p>If you create a new ResourceStorage through the StorageRepository->createLocalStorage method and there is already other ResourceStorages registered, it isn't possible to get the ResourceStorage object from either the StorageRepository->FindByUid or ResourceFactory->getStorageObject method.</p> <p>This is due to caches not being updated after the new ResourceStorage record have inserted into the database.</p> <p>I guess the best solution would be to have a signal to indicate when the storage cache should be updated, probably both in StorageRepository and ResourceFactory.</p>

[BUGFIX] Update local cache upon creation of new storage object

When a new storage object for the "local" driver is being created it is not possible to retrieve the new object instantaneous. The objects are being cached in a local static variable which needs to get flushed (set to "null") first.

Resolves: #89780

Releases: 8.7
