Controller-related methods will be removed in Fluid 3.0 and the way the View is set up in ErrorPageController, with no third party ability to overlay or override the template, it's equally fine to simply provide the full path to the only template that will be rendered. This prevents problems when TYPO3 CMS starts using Fluid 3.0.

[TASK] Avoid controller methods on Fluid RenderingContext

The getter/setter methods related to controller name and action name will be removed in Fluid 3.0.

An equally valid solution is to specify the template path and filename, which also avoids the lookup logic in Fluid from running and further increases the failsafe operation of this controller.
