Description	
Prerequisites: Typo3 v8.7.30 (most likely also in v9)	
Steps to reproduce: 1. Create folder in filelist 2. Create a file collection of type: folder from storage 2.1 Select a folder 3. Rename the folder used in the file collection in the filelist	
Expected behavior: Folder is renamed in the file collection	
Actual behavior: Folder still has the old file path in the file collection which isn't valid anymore so it shows: Invalid value	
Additional notes: Possible solution might be to implement something similar to the FileReference -> FolderReference and have the filecollection use database entries Also when renaming a folder in the filelist the paths for subfolders have to be adjusted Other possibility would be to check filecollections for references to the folder or subfolder and update it

Hi, as Georg already mentioned this is a duplicate of [#78036](#), which was already merged in the meantime (See: <https://review.typo3.org/c/Packages/TYPO3.CMS/+/67441>).

Therefore, I'll close this issue now. If you think there is still something not working correct, please contact me so I can reopen this issue or directly create a new one.
