[FEATURE] Rework email notification for workspaces

Sending out emails when items have been processed on a stage change is now done via Fluid Email, allowing administrators to fully customize both subject and body of an email.

All emails sent by default contain more information and better structured contents instead of marker-based templates.

The following TSconfig options apply to customize the emails:

- tx_workspaces.emails.stageChangeNotification.generatePreviewLink = 0
- tx_workspaces.emails.layoutRootPaths
- tx_workspaces.emails.partialRootPaths
- tx_workspaces.emails.templateRootPaths
- tx_workspaces.emails.format = html (or "text" or "both")

Resolves: #90411

Releases: master

[BUGFIX] Working preview links in workspace mails

Fix a couple of issues with state change emails in workspaces:

- We still can't deep link to the backend. The generated comparisonLink to the side-by-side preview module is a workspace backend functionality. The generated links don't work and show the login form. The fix is to generate "preview links" instead which call a frontend. We may be able to improve this later, when core v11 allows deep linking.

- When changing the stage of a page delete placeholder - when a page is for deletion in live - preview link generation to these pages does not make sense, trying to generate such a link throws an exception "no connection to page tree", the ajax request fails and no mails are send. Fix is to catch the exception and leave out the link in the emails.
- Preview links did not carry the language id when sending notifications for state changes of non default language records. This is added to properly link to non-default language previews.
- A missing closing p-tag in the HTML mail.
- As a better default, preview links are now always added to the mails if possible. In rare cases where this is not wanted, the mail templates should be adapted.
