Description

When Objects are placed outside a Site Configuration (root tree of site), translation fails to work. This was not an issue TYPO3 9.

It is common to share translatable objects between different site configurations. It seems to be related to the selection of `sys_languages`. Inside a site-tree all available languages are available. Outside a site-tree only the main language is available. Hence, no translation.

Translation does not work on objects outside site-tree. The system does not recognize any language other than default. Languages are not loaded from database within TCA select, nor site configuration. No issues in TYPO3 9.* with this translation of objects outside site tree.

Image 3a en b show that the translation fails. Do I move the object within a site tree, image 4, everthing works. But this is far from logical if you want to use objects accross to site trees.
