TYPO3 Core - Bug #90966

Page TS config for languages won't work in list modul

Description

Hi,

we figured out, that e.g. the following page ts config don't work in list module, because the new translation select box doesn't disappear:

```
mod.SHARED {
    disableLanguages = 1,2,3
}
```

Deeper testings lead us to the conclusion, that in the RecordListController the method mainAction will be called before the method init, so $this->id is empty and no ts config can be gathered in TYPO3\CMS\Core\Site\Entity\NullSite::getAvailableLanguages later to reduce the amount the found languages.

This will fix that in TYPO3\CMS\Recordlist\Controller\RecordListController::mainAction:

```
    // $this->siteLanguages = $this->site->getAvailableLanguages($this->getBackendUserAuthenti
cation(), false, (int)$this->id);
    $this->siteLanguages = $this->site->getAvailableLanguages($this->getBackendUserAuthenticat
ion(), false, (int)GeneralUtility::_GP('id'));
```

Thanks for fixing.

Associated revisions

Revision 7fd874e6 - 2020-09-18 22:12 - Daniel Windloff

[TASK] RecordListController: Merge init() and main() to mainAction()

Merge the methods `init()` and `main()` to the `mainAction()` method.
Remove unnecessary properties, which were only used to transfer values
between these methods.

Initialize `siteLanguages` with the current page uid.

Am I correct, that this only happens, if the page has no site config (otherwise there wouldn't be a NullSite in use) and the languages are set in the old way with TypoScript? (Otherwise there wouldn't be other languages than "0", because there no site config was found for this page)

Yes, in our case we don't need the site config, because we handle the routing in that application on our own. But for editing the records, we need the sys_languages.
