<b>Description</b>			
Hello,			
it would be great to generate a Module and filter them by record_type (configured in TCA). Backend Module is registered and route is by			
<pre>public function bookAction() {     \$uriBuilder = GeneralUtility::makeInstance(UriBuilder::class);     \$uri = \$uriBuilder-&gt;buildUriFromRoute('web_list', array(         'id' =&gt; 79,         'table' =&gt; 'tx_vatemplate_domain_model_book',         #filter by record type -&gt; currently not possible         'record_type' =&gt; '1'     ));      \$this-&gt;redirectToUri(\$uri); }</pre>			
Best would be to add a custom where clause like ' AND book_type=1'			
Thanks and best regards, Harald

Hello Harald,

that doesn't do exactly as you suggest, but the behavior is quite similar:

The extension querybuilder <https://extensions.typo3.org/extension/querybuilder/> could be used to set a filter for the list module rows.

Furthermore, I suggest having a look to the following hook, as it may solve your issue:

<https://docs.typo3.org/c/typo3/cms-core/master/en-us/Changelog/9.2/Feature-83740-CleanupOfAbstractRecordListBreaksHook.html>

This hook could be used to add additional constraints e.g. book\_type=1.

Best regards,  
Daniel
