[TASK] DatabaseRecordList: Streamline limit handling

The actual limit, used in the getTable(), depends on various configurations, current view (default view, single table view) and current action (view, search or csv export).

To get a better overview, the patch moves limit handling to the getTable() method, so limit handling in start() and generateList() can be removed. The properties itemsLimitPerTable and itemsLimitSingleTable are removed as well.

The configured limit (excluding search and CSV export) is now forced to be in a range from 5 to 10000.

For translated pages, the pages configuration is used to set the limit.

The limit is set by the following chain:

[default view with multiple tables; single table view]

- default value [20; 100]
- if page ts config is set [itemsLimitPerTable; itemsLimitSingleTable]
- if tca configuration is set [maxDBListItems; maxSingleDBListItems]
- a forced range from 5 to 10000
- if limit is set in the search
- no limit for a csv export

Releases: master
