#### Description

The error message

```
Undefined index: AdminPanel in fluid/Classes/Core/ViewHelper/ViewHelperResolver.php on line 65
```

is shown in frontend.

The code in fluid is looking like this, line 65 is marked with ">>":

```
public function __construct()
{
    $this->namespaces = $GLOBALS['TYPO3_CONF_VARS']['SYS']['fluid']['namespaces'];
    if (TYPO3_REQUESTTYPE & TYPO3_REQUESTTYPE_FE && $this->getBackendUser() instanceof Backend
UserAuthentication) {
>>        $configuration = $this->getBackendUser()->uc['AdminPanel'];
        if (isset($configuration['preview_showFluidDebug']) && $configuration['preview_showFlu
idDebug']) {
            $this->namespaces['f'][] = 'TYPO3\\CMS\\Fluid\\ViewHelpers\\Debug';
        }
    }
}
```

I think here should be probably a check if the variable exists in "uc", if I'm not wrong it might never be set at all and it could be quite common that this error is shown. I don't know the trigger though, therefore have no idea why I see this error for the first time.

A backtrace longer than two elements is killing the instance, but here it is:

```
