Description			
Just stumbled over following issues (compared to latest 10)			
<ul style="list-style-type: none">• Localization column of localized records has no indentation anymore• Possible localization buttons are rendered for -1 records• Possible localization buttons are rendered for free mode records• Possible localization buttons rendered for already localized languages after localizing Free mode records			
See Screenshots v10 and v11 for the comparison and v11(2) to see what happened after localization of free mode records.

[BUGFIX] Restore recordlist localization behaviour

With #92133 the translation and localization behaviour within recordlist was streamlined. Thereby some changes were made that led to unexpected changes. These are now fixed.

The LocalizationPanel is not shown anymore for records which are already localized in all possible languages, are in free mode or have sys_language_uid -1 set.

This is achieved by taking the TranslationConfigurationProvider::translationInfo() result into account again.

The indentation of the "Localization" column on localized rows is added again. Furthermore, a misbehaviour is fixed in which the rows' l18n_parent field was checked directly instead of the defined transOrigPointerField field. As a result, the indentation was only applied to tt_content rows as this is the only core table having l18n_parent as transOrigPointerField configured.

Resolves: #92447

Relates: #92133
