

TYPO3 Core - Bug #92539

Linkvalidator: User sees entire page path in list of broken links, should see mountpoint or current page as root page

Description

following page tree

```
start/
├── a
│   └── mountpoint
│       ├── m_a1
│       └── m_a2
└── b
```

A user has page "mountpoint" as start page. He does not see the other pages above (/start/a). But in the list of broken links, the page "mountpoint" is listed as start/a/mountpoint (using the titles) in the second column ("Path").

Element	Path	Lin
 Link to external URL (Field: URL)	/Congratulations/Test/Test broken links xyz ssdf/linkvalidator test for #52912: Link validator does not check links in input fields/	
 External link (Field: URL)	/Congratulations/Test/Test broken links xyz ssdf/	

Here, the mountpoint is "Test broken links xyz ssdf", but the path leads with /Congratulations/Test (which is not visible to the user).

Probably, not the entire path should be listed but just the path starting with either:

- the mountpoint
- OR the page the user has currently selected.

In other lists in "Info" module this is done differently, e.g. in localization view where you see the tree view.
