<b>Description</b>	
Hey there	
We have a system which has a separate domain for each language.	
<ul style="list-style-type: none"><li>• DE =&gt; german_domain.ch</li><li>• FR =&gt; french_domain.ch</li><li>• EN =&gt; englisch_domain.ch</li></ul>	
Most of the time this works great in most circumstances, but when it comes to the redirects things are not working as they should. At the moment we can't redirect a url with a foreign language.	
french_domain.ch/test leads to the site in the default language, but not to the page in French as we would expect it.

Hi, how have you configured the redirects?

I have set the following for testing:

- I have configured two domains in ddev
- Page A (source) is a simple redirect to Page B (target)
- Page A (source) mapped to my danish domain
- Page B is a redirect in this form: "t3://page?uid=1 - - - &L=1"

In order for L=1 to be used, I have to switch on the option "Keep GET Parameters".

After that, the redirect ran successfully. Does that help you?

I admit: rather suboptimal from a UX point of view, but you get there. Perhaps more detailed documentation would help here?
