#### Description

It is possible to search by uid in the page module.

I notice this does not work in some cases. This makes the work and tracking down of problems very tedious, esp. if you have lots of content elements on a page and are looking for an element without a header.

I could now reproduce this for elements which are within a gridelement. But I am not 100% sure if this is really the problem (may be related to colpos=-1).

The screenshot shows the search interface in the TYPO3 page module. At the top, there are controls for 'Columns' and 'Deutsch'. Below that, there are icons for search and refresh. The main search area has a 'Search term:' field containing '315046'. Below the search term is a 'Search levels:' dropdown menu set to 'This page' and a 'Limit:' field set to '10'. A 'Search' button is located at the bottom of the search area.

#### System

- TYPO3 9.5.22
- 9.5.0

I researched further and it seems this is related to gridelements. See <https://gitlab.com/coderscare/gridelements/-/issues/164>
