Description

Some variable are not checked properly before usage:

```
$slide = isset($conf['slide.']) ? (int)$this->cObj->stdWrap($conf['slide'], $conf['slide.']) : (int)$conf['slide'];
```

here even \$conf['slide'] might not be set, that's producing an error then.

```
$slideCollect = isset($conf['slide.']['collect.']) ? (int)$this->cObj->stdWrap($conf['slide.']['collect'], $conf['slide.']['collect.']) : (int)$conf['slide.']['collect'];
```

here even \$conf['slide.']['collect'] might not be set, that's producing an error then.

```
$slideCollectReverse = isset($conf['slide.']['collectReverse.']) ? (int)$this->cObj->stdWrap($conf['slide.']['collectReverse'], $conf['slide.']['collectReverse.']) : (int)$conf['slide.']['collectReverse'];
```

here even \$conf['slide.']['collectReverse'] might not be set, that's producing an error then.

```
$slideCollectFuzzy = isset($conf['slide.']['collectFuzzy.'])  
? (bool)$this->cObj->stdWrap($conf['slide.']['collectFuzzy'], $conf['slide.']['collectFuzzy.'])  
: (bool)$conf['slide.']['collectFuzzy'];
```

here \$conf['slide.']['collectFuzzy'] might not be set, that's producing an error then (line 3 above).

```
$conf['select.']['pidInList'] = $this->cObj->getSlidePids($conf['select.']['pidInList'], $conf['select.']['pidInList.']);
```

here \$conf['select.']['pidInList'] might not be set, that's producing an error then.

Data to test:

```
config.pageTitle.stdWrap.override.cObject = CONTENT  
config.pageTitle.stdWrap.override.cObject {  
    table = tt_content  
    select {  
        where = colPos=0  
        # pidInList = this  
        # uidInList = this  
        orderBy = sorting  
        selectFields = header
```

```
        max = 1
    }
    # slide = 0
    # slide {
    #     collect = 0
    #     collectReverse = 0
    #     collectFuzzy = 0
    # }
    renderObj = TEXT
    renderObj.value.field = header
    # if.isFalse = 0
    if.isFalse = field : seo_title
}
```

Commented lines were added to make the TypoScript passing the hurdles in the code.
