#### Description

With [#80420](#) multiple recipients are possible in forms. However, placeholders like {email} are not supported anymore like they used to be for the old single options.

Before:

```
finishers:  
-  
  identifier: EmailToReceiver  
  options:  
    recipientAddress: '{email}'  
    recipientName: 'To Example'
```

After, not working:

```
finishers:  
-  
  identifier: EmailToReceiver  
  options:  
    recipients:  
      '{email}': 'To Example'
```
