#### Description

Hi Armin,

After updating to 2.6.1 version on TYPO3 V10.4.10, the DCE Module has disappear.  
When clicking on the empty module, the following message occurs.

Sorry, the requested view was not found.

The technical reason is: No template was found. View could not be resolved for action "index" in class "T3\Dce\Controller\DceModuleController".

	Dynamic Content Elements (DCE)	dce	2.6.1	stable
	News events	eventnews	4.0.0	stable
	Form log	formlog	1.3.3	stable
	LDAP / SSO Authentication	ig_ldap_sso_auth	3.6.0	stable

Deactivating, and reactivating DC extension, all caches cleared, nothing more....

Don't have any idea how to resolve that.

My template extension built with SitePackage Builder is dependant on "Container Content Elements" Extension. The dependency constraint on "container" extension written in the ext\_emconf.php of my template extension breaks the DCE module :

```
$EM_CONF[$_EXTKEY] = [ 'constraints' => ['depends' => ['container' => '1.2.0-1.2.99' ] ] ];
```

When removing this constraint, the DCE module reappears in the backend...

Armin, do you know what could produce this behavior in DCE extension?

- Priority changed from *Should have* to *Won't have this time*

Sorry, no clue. Is it still an issue for you?

## #3 - 2021-06-01 12:05 - Stefan Müller

I had nearly the same problem. My problem was that I have set the `$_EXTKEY = "xy"` by migrating other Extensions for TYPO3 10.4.

So the cause were my other extensions which I had to fix.

In `ext_tables.php` of DCE the following line was involved:

```
$boot($_EXTKEY ?? 'dce');
```

setting it to following would also solve the issue:

```
$boot('dce');
```

## #4 - 2021-07-01 06:50 - David Prodinge

Short feedback: we have the same issue with an old TYPO3 installation that I am upgrading from 7 to 10. It's running but some issues are still work in progress.

We used DCE since version 1.3.6 (since 2016/2017 I think) with TYPO3 v7.

Currently we use DCE version 2.7.2 with TYPO3 10.4.17

Extkey seems to be the culprit: with `$boot('dce');` in `ext_tables.php` it works fine.

Before it would not be visible in TYPO3 backend (with error message "Sorry, the requested view was not found." if clicked on the "empty place" where the module icon and name should be.

Or more recently we got the following exception and TYPO3 would not load at all:

```
Uncaught TYPO3 Exception: #1460976610: The option "source" is required and must not be empty | InvalidArgumentException thrown in file /var/www/html/_here_project_directory_/releases/20210630124148/public/typo3/sysext/core/Classes/Imaging/IconProvider/SvgIconProvider.php
```

At debugging we found that the source path for DCE icon was not set.

Our simple workaround is setting `$boot('dce');` in `ext_tables.php`.

## #5 - 2021-07-06 21:11 - Armin Vieweg

- Status changed from *New* to *Accepted*

- Priority changed from *Won't have this time* to *Must have*

You mean [https://bitbucket.org/ArminVieweg/dce/src/7e5cb19f5504c1dc6770a8c7958ee18fdd5ff7ff/ext\\_tables.php#lines-72](https://bitbucket.org/ArminVieweg/dce/src/7e5cb19f5504c1dc6770a8c7958ee18fdd5ff7ff/ext_tables.php#lines-72) this does not work?

Maybe, when any extension set the `d_ext_key` it is not null. I'm going to replace it. Thanks for reporting!

## #6 - 2021-07-28 14:59 - Armin Vieweg

- Status changed from *Accepted* to *Resolved*

Fixed in DCE 2.7.3
