Description			
The reset password command uses the method createFakeWebRequest to create a PSR-7. Since FluidEmail uses TSFE, TSFE::getGlobalInstance() is called from the service container. This method however checks since #92953 for the application type. Since the application type is not set on faking the request, this fails and leads to: 'No valid attribute "applicationType" found in request object.'

[BUGFIX] Set applicationType in ResetPasswordCommand

Since #92951 the PSR-7 request used in Core contains the `applicationType` attribute. Because ResetPasswordCommand creates its own "fake" request object, the new attribute must also be added there, to prevent a RuntimeException.

Resolves: #93111

Releases: master
